## 1. PRODUCT DESCRIPTION

The theme for this computer is Christmas Green Tech. This computer is built using two main materials which are perspex and plywood where both of these materials are a good heat insulator.

This computer is used to do daily activities such as doing assignments. There are many benefits of using this computer. Firstly, we are using a water cooling system that can remove heat from the processor. Secondly, this computer has a large capacity because it has 2GB RAM and 500GB internal storage. Last but not least, this computer is also eco-friendly because we are using natural sources such as water and river stone.

## 2. TOTAL COST:

- I. Development Cost: RM 709.51
- II. Estimation Market Price: RM 850.00
